11.2.2 Release Notes

July 31, 2012

Publication Information

Contents

Introduction

This document outlines the issues resolved in the Infor10 Supplier Exchange (SupplyWEB) version 11.2.2 service pack. This service pack is intended for all SupplyWEB customers. Custom code will be overwritten with this service pack. Contact customer support for further information or assistance.

Solutions

Advance Ship Notice

Deliver To does not display on shipment created via X12 856

If an X12 ASN was sent in for a Discrete PO that contained a Deliver To element, the ASN in SupplyWEB did not reflect the Deliver To of the DPO. This issue has been resolved so that if there was a DPO line shipped with a Deliver To and the Deliver To was not already set it would set the Deliver To for the ASN in SupplyWEB from the DPO.

Defect Number: 360907 / Incident Number: 5545078

ASN created via X12 856 cannot be printed

If an X12 ASN was loaded the customer could not print shipping documents on the ASN. Validation errors usually seen at the time of shipper creation were displayed. This issue has been resolved so that the application will only try to validate the shipment prior to generating the PDF documents if the shipment was staged shipment which is the only time when the validation checks should be applied.

Defect Number: 360929 / Incident Number: 5545093

Blanket Purchase Orders

Blanket PO alert shows PO changed when a new PO is published

The supplier alert for Blanket PO was showing Blanket PO changed when a new Blanket PO was published. This error has been resolved.

Defect Number: 360434 / Incident Number: 5345066

Blanket PO fails to be exported as 850

Blanket purchase orders would give errors while exporting in X12 850 format. The Blanket PO file would be generated but not get exported to the VAN and it would remain in the Receive Now screen. These errors have been resolved and the blanket PO will now export correctly as an X12 850.

Defect Number: 361698 / Incident Number: 5652192

Defective Materials

Deleting the only disposition for a DMN causes error

If a user attempted to delete a disposition while editing a saved/published DMN, the DMN would become invalid. This error has been resolved. If a DMN is published, the last disposition cannot be deleted as there must be at least one disposition associated with each published DMN. The user will receive an error message notifying them that the last disposition for the DMN cannot be deleted if the DMN is published. If the DMN has not been published, dispositions can be deleted with no error message.

Defect Number: 347978 / Incident Number: 5289417, 5452773

DMN captions for Reason Code Description and Source of Defect Description not displaying correctly

When viewing an existing DMN the captions for the Reason Code: Description and Source of Defect: Description were incorrect. This issue has been resolved.

Defect Number: 361159 / Incident Number: 5551134

Invoice Profile

Cannot submit changes to Invoice Profile using Internet Explorer 9

Several of the Invoice Profile screens on the supplier side would not update properly while using Internet Explorer 9. The error has been resolved. Note that Internet Explorer 9 is not yet certified for Infor10 Supplier Exchange.

Defect Number: 362035 / Incident Number: 5658125

Packaging Maintenance

Packaging maintenance allows for decimal value in Qty Per container field

The packaging maintenance has been altered to allow for decimal values in the quantity per container field. The shipper creation already had the ability to create this packaging automatically if decimal quantities were shipped.

Defect Number: 346507 / Incident Number: 5252394

Proposed Purchase Orders

PPO BOD fail to load if it has more than one line number

If a Proposed Purchase Order BOD had more than one line item it would fail to load through ION. DPOs through ION would also fail to load if there was no buyer in the CustomerParty. These errors have been resolved and PPOs with multiple line item and DPOs with no buyer in the CustomerParty will load correctly in SupplyWEB.

Defect Number: 361214 / Incident Number: 5556767

PPO exported to AutoEx missing the ISA and GS segments

Proposed Purchase Orders exported to AutoEx as 850 were missing the ISA and GS segments which prevented the supplier from receiving the 850. This issue has been corrected so that the ISA and GS segments are correctly built and added to the X12 PPO documents.

Defect Number: 361703 / Incident Number: 5558724

PPO Management taking a long time to show filter

When clicking on the PPO Management menu item the query to return PPO list for the filter was still executing even though the PPO number drop down list was changed to a PPO number text box. This error has been resolved so that the filter screen will not run the query for the PPO list which was no longer being used by the screen.

Defect Number: 361936 / Incident Number: 5496395

PPO alert emails don't include Customer PO number on all alerts

Previously, only 2 of the PPO alerts included the customer Purchase Order number on the PPO alert emails. This caused confusion with suppliers since they generally associate orders in their systems by the Discrete PO number and not the PPO number. This issue has been resolved and PPO events will include the DPO number in the PPO alerts.

Defect Number: 362415 / Incident Number: 5500152

File status message for PPO has supplier and ship to values swapped

When a PPO loaded through OnRamp, the document would load correctly but in File Status screen the supplier and ship to values were exchanged. This issue did not cause any functional issues but has been resolved to show the correct message.

Defect Number: 362838 / Incident Number: 5675424

Receipts

Receipt containing shipper number showing shipment as in transit

If the shipper number was sent in a receipt BOD instead of the ASN number, the ASN in SupplyWEB would still show as In Transit. The validation has been changed so that either shipper number or ASN number will be accepted as valid data in the receipt BOD.

Defect Number: 362094 / Incident Number: 5660443

Releases

Releases exported to VAN with wrong trading partner IDs

If a customer had the old "undefined" type set up for EDI, it would fail to find that type in order to determine the proper enveloping for the X12 document. This prevented documents from being routed to the correct supplier via the VAN. The defect has been resolved so it would also check for the old undefined type.

Defect Number: 349452 / Incident Number: 5307622

Supplier Part Cross Reference

Supplier unable to include colon or percent characters in part

Customers could use percent (%) or colon(:) characters in the part number, but suppliers could not even when the characters were not black-listed. This issue has been resolved.

Defect Number: 362259 / Incident Number: 5658128

SMI

SMI alerts showing part description instead of part numbers

SMI alerts would sometimes have the part description instead of the part number. This issue has been resolved so that when the customer part documents load for SMI parts it will properly assign the part number instead of the part description.

Defect Number: 362433 / Incident Number: 5556286

Enhancements

Operating System and Java

New application support for 64 Bit Linux

With this release, SupplyWEB can be installed and run in a 64 bit Linux operating system (Suse 11 Enterprise).

New application support for 64 Bit Java

With this release, SupplyWEB can be run using a 64 Bit JVM. The application installer will be available as a 32 bit and 64 bit executable program. The use of the 64 bit application installer requires a 64 bit operating system. The 32 bit application installer can be used on either a 32 bit or 64 bit OS.

The 64 bit application installer will give the user the ability to specify more memory for the SupplyWEB services to use.

Blanket Purchase Order

New alerts for Blanket Purchase orders

New alerts have been added if a new Blanket PO is published or if an existing Blanket PO is changed. These alerts are for suppliers only.

Defect Number: 358566 / Incident Number: 5345066

Defective Materials

Response date column in Manage DMNs now available

The Manage DPRs list screen has been modified on the customer and supplier sides so that they will show the date of last response from the supplier.

Defect Number: 262336, 300042 / Incident Number: 4225249

Manage DMNs list view now shows Pending tab

A new tab for pending DMNs has been introduced with this release. Pending DMNs are defined as DMNs that require an action or response from the party currently logged in. The Pending DMNs tab will therefore show different items for supplier and customer. The Pending tab for customers will show any DMN that requires a response from the customer while the Pending tab for suppliers will show any DMN that requires a response from the supplier. The Open tab vice versa will show all DMNs that require an action or response from the other party. The Open DMNs tab for customers will show any DMN that requires a response from the supplier while the Open DMNs tab for suppliers will show any DMN that requires a response from the customer.

Defect Number: N/A / Incident Number: N/A

Manage DMNs list view has pagination and sorting by clicking on column headers

The Manage DMNs list view now allows for pagination by including 10 items on each screen and allows users to jump to any page. Users can now also sort by clicking on the column headers including DMN ID, Facility, Supplier, Part etc.

Defect Number: N/A / Incident Number: N/A

Manage DMNs list view has additional date time fields

Manage DMNs list view has 4 additional date time fields:

- Date Published: The Date on which the DMN was published by customer.

- Date Last Modified: The date on which the DMN was last modified by either customer or supplier.

- Date Last Response: The date on which the DMN was last responded to by the supplier.

- Date Closed (only for closed DMNs in the closed tab): The date on which the DMN was closed. Note that closing a DMN is a function internal to the application. No user input is required for closing DMNs.

Defect Number: N/A / Incident Number: N/A

Delivery Performance Report

Improved performance of Manage DPRs filter screen through new Part filter

The Manage DPRs filter screen has been modified on the customer side so that it will not load all the parts during initial load of the screen. The screen has been modified with the new part filter as described below for Schedules.

Defect Number: N/A/ Incident Number: N/A

Improved performance of Manage DPRs search execution

The Manage DPRs results screen on the customer side has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Event Management Console

Improved performance of the EMC run time

The EMC service has been modified to perform faster and more efficiently. Database queries and application code have been modified to improve performance in certain key areas. The requirement logger has been restructured to implement multithreading amongst the five main requirement logger categories.

A few new emc.properties file optional parameters have been added to further improve performance.

- releases.unviewedScheduleDaysInPast - this parameter is used by the requirement logger to limit the data retrieved by the "releases unviewed" query. The default value is 30 days in the past from the current day.

- releases.pastDueScheduleDaysInPast - this parameter is used by the requirement logger to limit the data retrieved by the "releases past due" query. The default value is 30 days in the past from the current day.

- shipment.asnLastPublishedStartDate - this parameter is used by the shipment logger to limit the data retrieved by the "asn last published" query. There is no default value. The value is a fully specified date the query from. Valid date format is: YYYY-MM-DD. This parameter will be changed to a rolling date format like the releases.unviewedScheduleDaysInPast parameter in the next release.

- logExcludeClassAndMethods - this parameter is used to control the logging of information in the emc log file. The values are a list of classes and methods to exclude from logging. This parameter can significantly reduce the number of emc log files that are created.

    Recommended setting:

    logExcludeClassAndMethods=EvEmcTransDaoImpl.addCreateToBatch,EvEmcTransDaoOracle.buildInsertSql,EvEmcTransDaoImpl.executeBatch,EvEmcTransDaoOracle.executeBatch,EvEmcTransDaoSqlServer.buildInsertSql,EvEmcTransDaoSqlServer.executeBatch,EvEmcBEventSummaryDaoOracle.buildInsertSql,EvEmcBEventSummaryDaoImpl.addCreateToBatch,EvEmcBsEventSummaryDaoImpl.addCreateToBatch,EvEmcBsEventSummaryDaoOracle.buildInsertSql,EvEmcBEventSummaryDaoImpl.executeBatch

Defect Number: N/A/ Incident Number: N/A

EMC run frequency changed to 30 minutes

The default run frequency for EMC has been changed so that it will run every 30 minutes instead of every 20 minutes.

Defect Number: N/A/ Incident Number: N/A

Gateway

Multiple gateway instances can be used for improving performance

Multiple gateway instances can now be installed and configured to improve overall inbound file processing throughput. The details are explained in a separate guide, "SupplyWEB Multiple Gateway Services Guide.pdf"

Defect Number: N/A/ Incident Number: N/A

Receipts

Improved performance of Reconcile to ASN filter screen through new Part filter

The Reconcile to ASN filter screen has been modified so that it will not load all the parts during initial load of the screen. The screen has been modified with the new part filter as described below for Schedules.

Defect Number: N/A/ Incident Number: N/A

Improved performance of Reconcile to ASN search execution

The Reconcile to ASN results screen has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Reports

Improved performance of Shipment History Report filter screen through new Part filter

The Shipment History Report filter screen has been modified so that it will not load all the parts during initial load of the screen. The screen has been modified with the new part filter as described below for Schedules.

Defect Number: N/A/ Incident Number: N/A

Improved performance of Shipment History Report search execution

The Shipment History Report has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

SCAC Maintenance

Users can now insert multiple SCAC codes at once

The Add function for SCAC maintenance has been changed to allow for multiple additions at once. Users no longer have to enter one SCAC at a time.

Defect Number: N/A/ Incident Number: N/A

Default SCAC list populated with 85 codes

The SupplyWEB base application now includes 85 SCAC codes that will be available to all customers and suppliers. The list of newly added SCAC and BIC codes are included in Appendix A of the release notes.

Defect Number: N/A/ Incident Number: N/A

Buyer characteristic to allow suppliers to add own codes

A new buyer characteristic, "Allow Supplier to use Own Carrier Codes', has been introduced that will allow the customer to indicate if suppliers are allowed to create or edit their own codes. The default value for the flag is set to checked (or allowed) which is consistent with previous releases of Infor10 Supplier Exchange. If the customer later unchecks the flag, all supplier created SCAC codes will be retained, but the supplier will no longer be allowed to add or edit codes.

Defect Number: N/A/ Incident Number: N/A

Buyer characteristic and carrier code list to allow BIC codes, SCAC codes or both

Infor10 supplier exchange now allows for BIC codes in addition to SCAC for the carrier codes. The International Standards Organization references BIC which is the ISO approved registration authority for container owners' codes. All BIC codes are freely available on their website, unlike SCAC codes which are generally available for a fee. The BIC code list is mutually exclusive from SCAC codes. A new buyer characteristic, "Carrier Code Types", has been introduced that will allow customer to indicate if only SCAC codes can be used for the carrier codes, or only BIC codes can be used or both can be used. The characteristic applies to all screens that display the SCAC list including the Edit shipper screen and the SCAC maintenance screen for customers and suppliers. The list of newly added SCAC and BIC codes are included in Appendix A of the release notes.

Defect Number: N/A / Incident Number: N/A

New customer and supplier API for carrier codes

A new CarrierCode API has been created to allow customers and suppliers to import their own list of SCAC or BIC codes. Note that codes can only be inserted and not updated via the API. The full description of the CarrierCode API is mentioned in the "SupplyWEB XML API Guide".

Defect Number: N/A / Incident Number: N/A

Schedules

Improved performance of releases filter screen through new Part filter

The releases search screen has been modified so that it will not load all the parts during initial screen load, which was the biggest reason for poor performance of the search screen. A new dropdown has been created for Parts which will allow users to search for parts either by listing all parts or by selecting parts, after specifying the range of parts to be searched:

1. User selects the List Parts option from the Customer Part dropdown: This will load all parts into the Part List dropdown. User can then select a single part or select all parts to conduct searches. This functionality is similar to the functionality existing in previous SupplyWEB versions where all parts would be loaded into the Part filter. A user could then select a single part or all parts for searching for releases.
2. User selects the Select Parts option from the Customer Part dropdown: Selecting this option will prompt the user to specify the start and end range for the parts to be selected. When the user specifies these 2 criteria and clicks on the Refresh List button, the Part List will be populated with all the parts that match the specified criteria. The user can then either select a part from the Part List dropdown or use the <All> feature to search for demand for all parts that match the specified criteria. For example, user could specify '251' in the Part Start field and leave the Part End blank and then click on the Refresh List button. This will populate the Part List dropdown with all parts that start with the string '251'. User can then select a single part from the dropdown or select the 'All' option to search for demand for all parts that begin with the string '251'. User can also specify a single part '2513467' and then click on the Refresh List button. This will populate the Part List dropdown with the part selected which can be used to search for releases.

Note that the Supplier Part dropdown that is visible to suppliers on the Schedules filter screen will only display parts if one of the above options is selected in the Customer Part dropdown list.

Defect Number: N/A/ Incident Number: N/A

Show Part List check box on release filter screen unchecked by default

On the release filter screen under Advanced Search Criteria, the checkbox for Show Part List has been defaulted to unchecked for performance reasons. A user can still check the Show Part List checkbox to get the list of all parts by supplier on the releases results screen.

Defect Number: N/A/ Incident Number: N/A

Improved performance of releases search execution

The releases results screen has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Improved performance of Generate PDF for releases

The Generate PDF function for releases has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Improved performance of the Save As functionality for releases

The Save As function for releases has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Improved performance of Download Demand for releases

The Download Demand function for releases has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Single Sign On and Workspace Integration

Single Sign On and ability to add SupplyWEB as an application in Workspace

Infor10 Supplier Exchange can now be used with Single Sign On. This provides customer users with the ability to log in once using their active directory credentials via Microsoft Active Directory Federation Services or ADFS 2.0 and gain access to any system that supports Single sign on. SupplyWEB's implementation uses SAML protocol communication between the java application and AD FS 2.0 and uses the Fedlet client recommended by the Infor's FAA team. After Fedlet is configured SupplyWEB can act as an relying party application in AD FS and can accept requests from the ADFS Security Token Service also known as the "identity provider".

Note that the SSO functionality is only available to customer users and not to supplier users. All supplier users must continue to use their existing SupplyWEB login credentials. Integrated windows authentication is not supported at this time.

SupplyWEB 11.2.2 can work with or without single sign on. The base application will continue to default to SupplyWEB authentication and authorization. In order to enable Single sign on in SupplyWEB some configuration changes are required. All pre-requisites for single sign on must be reviewed and fulfilled before configuring SupplyWEB for single sign on. The details of the configuration changes are described in the SSO and Workspace configuration guide which is a new guide being introduced with this release.

In order for customer administrator users to use the Single Sign On functionality and still have access to the owner login, we have introduced a new menu item under Security for "Login as owner". This menu is only visible to administrators if they have Single Sign on enabled for SupplyWEB. Clicking on this menu item will bring up a new window prompting the user for the owner password. On successful login, the administrator will be able to use all features available to the owner. This feature will also work when the application is running inside Workspace.

SupplyWEB can be added as an application in Workspace version 10.1. Follow all the instructions for installing and configuring Workspace 10.1. You must select the Generic Product plug-in during installation to allow for SupplyWEB to be added. Once Workspace is installed and configured, navigate to the Workspace home site after logging in as a site collection administrator and add a new Workspace site as described in the "SSO and Workspace Configuration Guide". You must also give workspace users permission to access the SupplyWEB site as described in the aforementioned guide.

Defect Number: N/A/ Incident Number: N/A

Shipments

Improved performance of Shipping History filter screen through new Part filter

The Shipping History filter screen has been modified so that it will not load all the parts during initial screen load. The screen has been modified with the new part filter as described previously for Schedules.

Defect Number: N/A/ Incident Number: N/A

Improved performance of Shipping History search execution

The Shipping History results screen has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Improved performance of View ASNs filter screen through new Part filter

The View ASNs filter screen has been modified so that it will not load all the parts during initial load of the screen. The screen has been modified with the new part filter as described previously for Schedules.

Defect Number: N/A/ Incident Number: N/A

Improved performance of View ASNs search execution

The View ASNs results screen has been improved for better search execution performance by restructuring code and query optimizations.

Defect Number: N/A/ Incident Number: N/A

Appendix A

SCAC Codes:

1. DWVL - Delaware Valley Shippers Inc.
2. CXIB - CombinedExpress.com
3. COTO - Country Transport - Direct trailer service between Ontario/Quebec and Mexico
4. PLQG - Precision Logistics Group (Last mile (transportation))
5. TQYL - Total Quality Logistics
6. ZIPL - Zipline Logistics - www.ziplinelogistics.com (Multimodal)
7. STVG - Strive Logistics (Multimodal)
8. ELNR - Express Lane Transport aka ELT/Arco
9. USNW - U.S. Northwest Express or USNW Express - A CDS Company
10. YFSY - Yellow Transportation - A Less than truckload (LTL) carrier
11. RDWY - Roadway Express - A Less than truckload (LTL) carrier
12. PRLA - Purolator Courier - Canadian package delivery company
13. UPSN, UPSS, UPSC, UPSZ - United Parcel Service - A package delivery company
14. USPS - United States Postal Service
15. DEWC - De Well Container Shipping Corp.
16. DMAL - DHL Danzas
17. ABFS - ABF Freight System Inc. - A Less than truckload (LTL) carrier
18. FDEN - FedEx Express
19. CGLP - CGL/Concert Group Logistics, Inc (Freight Forwarder)
20. FDEG - FedEx Ground - A package delivery company
21. FDCC - FedEx Custom Critical
22. FXFE - FedEx LTL Freight
23. PTWT - Panther II Expedited Services, Inc. - An expediting company
24. SDCR - Samday WORLDWIDE
25. PLNZ, PSKL - Penske/Quality Express
26. JKFF - JackRabbit Fast Freight Corp - A delivery company
27. HAEI - Heartland Express
28. HYWK - Hyway Trucking
29. HGTN - Hogan Transport
30. SCNN - Schneider National
31. WESV - Wes Pro Fleet Services
32. AAIE - ALG Admiral
33. SWFT - Swift Transportation
34. FTLC - Findlay Truck Line Company
35. ANTT - Arnold Transportation
36. KKLU - "K" Line
37. SNLU - Schneider National
38. USIT - USA Truck
39. UDRY, USAW - USA Logistics
40. USXI - U.S. Xpress
41. CMDU - CMA-CGM (Compagnie Générale Maritime - Compagnie Maritime d'Affrètement)
42. YODA - D&D Sexton
43. YMLU - Yang Ming Line
44. DMLI - Diamond Logistics
45. SALT - Salser and Sons
46. OOLU - Orient Overseas Container Line
47. MOLU - Mitsui O.S.K. Lines
48. MAEU - Maersk Line

49. EGLV - Evergreen
50. HJSC - Hanjin
51. HDMU - Hyundai
52. APLU - American President Line
53. NYKS - NYK
54. LGOA - Logistics One Transport
55. USXL - USXL Worldwide
56. CNWY - Con-way
57. NXPL - National Xpress Logistics
58. COSU - Coscon Container Lines
59. MTEN - Marten Transport LTD.
60. MVMT - The Move Management Center
61. RYDD - Ryder Systems, Inc.
62. AACT - AAA Cooper Transportation
63. MCPU - MCC Transport Singapore Pte Ltd.
64. SAFM - Safmarine
65. WHLC - Wan Hai Lines
66. BAIE - Bailey's Express
67. BTTM - Bridge Terminal Transport
68. WENP - Werner Dedicated
69. CBHU - Cosco Bejing Hongkong Unit
70. JTSN - Johnny Tsunami Trucking
71. MHCU - Magshipping Container Lines
72. DLRT - Richard Daniels Transportation
73. CLLQ - Coyote Logistics LLC
74. ACLU - Atlantic Container Line
75. ANLC - ANL/US Lines
76. ZIMU - ZIM Integrated Shipping Services Ltd.
77. CHHK - China Shipping North America
78. HLCU - Hapag-Lloyd
79. MATU - MATSON
80. MSCU - Mediterranean Shipping Company
81. JAFR - Jaguar Freight Services
82. ODFL - OLD DOMININION FREIGHT LINES
83. SEFL - SOUTH EASTERN FREIGHT LINES
84. EXLA - ESTES EXPRESS
85. MGQI - Magic Transportation

BIC Code list is as follows:

1. AASU - AAC PERISHABLES LOGISTICS,INC
2. ABBU - ATLANTIC BULK CARRIERS MANAGMENT LTD
3. ACCU - ATLANTIC COAST CONTAINER BROKERAGE & SALES
4. ACIU - ALLSTATE CONTAINER INC
5. ACLU - ATLANTIC CONTAINER LINE
6. AFIU - AGMARK CAPITAL HOLDINGS INC.
7. AGMU - AGMARK CAPITAL HOLDINGS INC.
8. AGOU - AIRGAS DISTRIBUTION OPERATIONS
9. AIDU - ALBEMARLE CORPORATION
10. AIGU - AIRGAS SPECIALTY GASES
11. AIMU - TRS CONTAINERS & CHASSIS
12. AIRU - AIR PRODUCTS AND CHEMICAL INC.
13. ALEU - AIR LIQUIDE ELECTRONICS U.S. LP
14. ALIU - ALJOMA LUMBER INC.
15. ANYU - ONE WAY LEASE INC.
16. AONU - A123 SYSTEMS

17. APAU - APR ENERGY LLC
18. ARLU - A&R LOGISTICS
19. AVCU - AMVAC CHEMICAL COPORATION
20. AVSU - REC ADVANCED SILICON MATERIALS LLC
21. AWXU - ALASKA WEST EXPRESS INC.
22. BEAU - BEACON INTERMODAL LEASING LLC
23. BMLU - BERNUTH LINES LTD
24. BMOU - BEACON INTERMODAL LEASING LLC
25. BOCU - LINDE LLC
26. BOHU - BOH ENVIRONMENTAL , LLC
27. CAAU - CAI INTERNATIONAL
28. CAIU - CAI INTERNATIONAL
29. CAXU - CAI INTERNATIONAL
30. CAZU - CAI INTERNATIONAL
31. CBFU - CHIQUITA BRANDS INC
32. CBIU - CHICAGO BRIDGE
33. CCOU - COOLGAS INC
34. CGIU - CONGLOBAL INDUSTRIES
35. CHWU - CHEROKEE WEST ENTERPRISES
36. CIIU - CONTAINER-IT LLC
37. CIPU - CAI INTERNATIONAL
38. CKXU - CAKEBOXX TECHNOLOGIES,LLC
39. CNSU - CNS LOGISTICS INC
40. CNTU - ITLT SOLUTIONS
41. COWU - INGURAN LLC DBA SEXING TECHNOLOGIES
42. CPDU - CHEVRON PRODUCTS COMPANY
43. CRLU - SEACUBE CONTAINERS LLC
44. CTHU - CHEMICAL TRANSFER CO. INC.
45. CTWU - SEACUBE CONTAINERS LLC
46. CXCU - HORIZON LINES LLC
47. CYAU - CYANCO INTERNATIONAL,LLC
48. CZZU - CAI INTERNATIONAL
49. DCIU - DANA CONTAINER INC.
50. DFIU - DOLE FRESH FRUIT INTERNATIONAL
51. DHEU - D&H EQUIPMENT,LTD
52. DOCU - USDOC NOAA OCAO BMB
53. DPCU - DUPONT
54. DPSU - DART PORTABLE STORAGE, INC
55. DRYU - SEACUBE CONTAINERS LLC
56. DYNU - DYNEON LLC
57. EAMU - MARIANI ASPHALT COMPANY
58. EASU - WATERFRONT CONTAINER LEASING CO INC.
59. EMSU - EQUIPMENT MANAGEMENT SERVICES LLC
60. EPIU - EPIC-CONCEPTS LLC
61. EQRU - TRITON CONTAINER INTERNATIONAL CORPORATION
62. EQUU - EQUIPE CONTAINER SERVICES
63. EXFU - EXSIF WORLDWIDE
64. EXXU - EXSIF WORLDWIDE
65. EYIU - TRITON CONTAINER INTERNATIONAL CORPORATION
66. FAMU - FLEX BOX AMERICA LLC
67. FAZU - STP SHIPPING AND TRADING INC
68. FDPU - DEL MONTE FRESH PRODUCE COMPANY
69. FDXU - FEDEX TRADE NETWORKS
70. FGSU - DRISCOLL & BAILEY INC
71. FIBU - FLEXITANK INC.
72. FJKU - FLORENS CONTAINER SERVICES (USA) LTD

73. FMCU - FMC CORP. INDUSTRIAL CHEMICAL GROUP
74. FRSU - FRONTIER LINER SERVICES
75. FSNU - FIRESTONE NATURAL RUBBER CO
76. FTIU - FIBA TECHNOLOGIES, INC
77. FTLU - FRONTIER LOGISTICS LP
78. FVGU - FLEXI-VAN CORP
79. GAUU - GAUTHIER ON SITE STORAGE & GAUTHIERS OILFIELD RENT
80. GCIU - GLOBAL CARGO LOGISTICS LIMITED
81. GCRU - GARDNER CRYOGENICS
82. GEKU - STELLAR FREIGHT LTD.
83. GGSU - G&G MARINE INC
84. GIPU - SEACUBE CONTAINERS LLC
85. GLBU - CHEMTURA CORPORATION
86. GLKU - CHEMTURA CORPORATION
87. GNFU - GLOBAL NUCLEAR FUELS
88. GSPU - SEACUBE CONTAINERS LLC
89. GTIU - GENERAL ELECTRIC CAPITAL CORPORATION
90. GTMU - GTM MANUFACTURING LLC
91. GUIU - GETECON,INC
