About this guide

This guide provides detailed, comprehensive information about Infor EAM's data structure, including data models, definitions of tables and views, primary and foreign key definitions, constraint definitions, index definitions, and field descriptions.

Intended audience

This guide is intended for database administrators, system and data analysts, and IT managers with a high level of proficiency in Oracle or SQL Server programming and database management. It aides those readers in querying the database for information, and with adding customizations to the EAM application.

Organization

This table shows the chapters of the guide:

Section	Description
Data models (Oracle)	Representation of the Oracle data structures or data modeling by module in EAM.
Data models (SQL)	Representation of the SQL data structures or data modeling by module in EAM.
Tables (alphabetical by table)	Alphabetized list of EAM database tables with column names, column descriptions, and Oracle and SQL data types per database table.
Primary key definitions	Comprehensive list of rows of data in the EAM database table columns. Identifies all table records in EAM.

Section	Description
Foreign key definitions	Comprehensive list of columns in the EAM relational database table with linked primary key references. Establishes links between tables.
Views	Comprehensive list of EAM database views defined by queries for searching a database.
Constraint definitions	Comprehensive list of EAM database schema definitions by “associated” table, for defining data properties per database compliance.
Indexes	Comprehensive list of EAM data structures for speedy data retrieval operations on EAM database tables.
Field descriptions/usage	Comprehensive list of fields in the EAM database with field definition, and usage information including function code and function description.

Column name	Nullable	Oracle datatype	SQL Server datatype	Column description
C_ID	N	NUMBER(38,0)	bigint	Primary key - all of the provided database schemas have this set as auto-increment
C_XML	N	BLOB	varbinary	The message you are sending. The message must be encoded
C_TENANT_ID	N	VARCHAR2(250)	varchar(250)	Tenant code
C_MESSAGE_PRIORITY	N	NUMBER(2,0)	int	Messages with a higher priority will be sent before messages with a lower priority. You can set the priority from 0 to 9
C_CREATED_DATE_TIME	N	TIMESTAMP(6)	datetime	Time this row was entered into the database
C_WAS_PROCESSED	N	NUMBER(1,0)	int	Used by the ESB to determine if a message has been sent or not. Unprocessed messages will be mark as 0, processed messages will be marked 1

CCD_CONTRACTREVISION	N	NUMBER(8,0)	numeric(8,0)	Contract Header revision
CCD_CONTRACT_ORG	N	VARCHAR2(15)	nvarchar(15)	Contracting Organization selected on the Contract Item or Contract Header
CCD_CONTRACTITEM	Y	VARCHAR2(30)	nvarchar(30)	Contract Item. The equipment, project or work order for which this record is applicable.
CCD_SOURCECODE	Y	VARCHAR2(4)	nvarchar(4)	Combined information on: Header Template, Header, Item Template, Item, Generated Item
CCD_INVOICINGORG	Y	VARCHAR2(15)	nvarchar(15)	Invoicing Organization selected on the Contract Item or Contract Header
CCD_INVOICINGDESCRIPTION	Y	VARCHAR2(80)	nvarchar(80)	Invoicing Description
CCD_INVOICE	Y	VARCHAR2(1)	nvarchar(1)	Checkbox. Select or exclude this line from invoicing.
CCD_INVOICECONDITIONAL	Y	VARCHAR2(1)	nvarchar(1)	If selected the system will invoice only if the next lower level combined charges are greater than zero. If unselected the system will invoice no matter what.
CCD_CATEGORY	N	VARCHAR2(4)	nvarchar(4)	Charge Category, possible values: WO Charges, Sales Transactions, Fuel Charges, Energy Charges, Usage Charges, One Time Charges
CCD_LEVEL	N	VARCHAR2(4)	nvarchar(4)	Charge Level. The following values exist: Transaction Adjustment, Subcategory Adjustment, Charge Category Adjustment.
CCD_SUBCATEGORY	N	VARCHAR2(30)	nvarchar(30)	Charge Subcategory. there are values for each Charge Category.
CCD_RATE	Y	NUMBER(24,6)	numeric(24,6)	Rate
CCD_ADJPERCBEFORE	Y	NUMBER(7,4)	numeric(7,4)	Adjustment percentage of the transaction before other adjustments have been applied
CCD_ADJUNITPRICE	Y	NUMBER(24,6)	numeric(24,6)	Adjustment of the transaction price
CCD_ADJTRANSACTION	Y	NUMBER(24,6)	numeric(24,6)	Adjustment of the transaction
CCD_ADJPERCAFTER	Y	NUMBER(7,4)	numeric(7,4)	Adjustment percentage of the transaction after other adjustments have been applied
CCD_MINQTY	Y	NUMBER(24,6)	numeric(24,6)	The minimum quantity the system will invoice
CCD_MINCHARGE	Y	NUMBER(24,6)	numeric(24,6)	Minimum Charge. Minimum value of the charge. Say that you issues 1 O-ring for \$.25 and that is the all the work order charges you have to invoice, but you want at least \$25.
CCD_MAXCHARGE	Y	NUMBER(24,6)	numeric(24,6)	Maximum Charge. Maximum value of the charge. For example if no invoice line should be created for more than \$500 dollar.
CCD_FREEUPTO	Y	NUMBER(24,6)	numeric(24,6)	Free Up To. The first amount of work order charges are free
CCD_COSTBASIS	Y	NUMBER(24,6)	numeric(24,6)	Cost Basis
CCD_TAXBASIS	Y	NUMBER(24,6)	numeric(24,6)	Tax basis
CCD_TAXABLE	Y	VARCHAR2(1)	nvarchar(1)	Checkbox that indicates the line is taxable or not
CCD_TAX	Y	VARCHAR2(20)	nvarchar(20)	Tax Code. Reference to the applicable Tax Code used to calculate the tax amount.
CCD_USAGEUOM	Y	VARCHAR2(30)	nvarchar(30)	UOM. The meter UOM must be entered every time you create a Charge Definition for Usage Based charges
CCD_CHARGEESTUSAGE	Y	VARCHAR2(1)	nvarchar(1)	Charge Estimated Usage. The system will invoice actual usage entered in the form of meter readings, but if readings are not up to date, because the last two weeks no readings have been entered, the system will also invoice the estimated usage for those two weeks.
CCD_ROLLOVER	Y	VARCHAR2(1)	nvarchar(1)	Rollover. Like the rollover minutes of your cell phone plan. Normally if you are charging for 2000 miles a month and the customer only uses 1800 they lose the 200. With Rollover selected the 200 goes into a buffer that can be used in the next invoicing periods when they go over the 2000.
CCD_STARTMETERVALUE	Y	NUMBER(24,6)	numeric(24,6)	Starting Meter Value. The value of the meter at the beginning of the contract. This is the starting value for the first invoice
CCD_ESTDAILYUSAGE	Y	NUMBER(24,6)	numeric(24,6)	Estimated Daily Usage. If estimated usage is charged here you can specify the estimated daily usage.

CCD_TRADE	Y	VARCHAR2(15)	nvarchar(15)	Trade. Can be used to specify charges differently for the labor related Charge Subcategories
CCD_OCTYPE	Y	VARCHAR2(4)	nvarchar(4)	Occupation type
CCD_OCRTYPE	Y	VARCHAR2(4)	nvarchar(4)	Occupation system type
CCD_PARTCLASS	Y	VARCHAR2(8)	nvarchar(8)	Part Class. Can be used to specify charges differently depending for the material related Charge Subcategories (Stock Items, Direct Purchases) of the work order, depending on the part class
CCD_PARTCLASS_ORG	Y	VARCHAR2(15)	nvarchar(15)	Organization of the Part Class
CCD_SUBMETERED	Y	VARCHAR2(1)	nvarchar(1)	Submetered. Indicates that the space / equipment is submetered and that the system can use actual consumption records as the basis for Use Floor Area. The alternative to Submetered. Now the utility invoice determines the basis for the energy consumption. When you select Use Floor Area the system will try to calculate the Invoicing Percentage based on the floor area of the Contract Item and that of the utility bill source, i.e. typically the building that the Contract Item resides in.
CCD_USEFLOORAREA	Y	VARCHAR2(1)	nvarchar(1)	
CCD_INVOICINGPERCENTAGE	Y	NUMBER(7,4)	numeric(7,4)	Invoicing Percentage. Percentage of the utility bill consumption that will be invoiced.
CCD_UTILITYBILLSOURCE	Y	VARCHAR2(30)	nvarchar(30)	Utility Bill Source. Reference to the equipment that is referenced on the utility bill. Note that the utility bill may determine the consumption, but also the rate, if the rate was not specified specifically on the Charge Definition record
