# Chapter 1

## Infor PM Enterprise Analytic Applications

1

The chapter consists of the following topics:

Topic	Page
Overview	1-2
BI Specific Instructions	1-4

## Overview

Infor PM Enterprise Analytic consists of several business concepts and solutions that are delivered on business concept / enterprise analytic level. After every major release of CPM product, the warranty team addresses all the issues post release through SDS solutions. When we have these solutions published and accumulated, we consolidate all the post release solutions as a bundle that will logically have a functional and technical impact on the product.

This document contains the information in detail over the bundling process that was carried out for the release of version 2.8.2 for CPM LN Enterprise Analytics.

It lists all the appropriate individual SDS solutions analytic wise that was released since GA of the maintenance release version 2.8.1 of the CPM LN Enterprise Analytics.

Bundling solution consists of the ETL and BI solution zips that contain the consolidated solution components for the following Analytics along with the necessary documentation.

- Accounts Payable Analysis 2.8.2 for SSA ERP LN
- Accounts Receivable Analysis 2.8.2 for SSA ERP LN
- General Ledger Analysis 2.8.2 for SSA ERP LN
- Inventory Analysis 2.8.2 for SSA ERP LN
- Procurement Analysis 2.8.2 for SSA ERP LN
- Production Analysis 2.8.2 for SSA ERP LN
- Sales Analysis 2.8.2 for SSA ERP LN

## Steps to Install the Infor PM Enterprise Analytic Application

ETL Installation Sequence: ETL solutions for all analytics need to be installed in the following order for a successful execution.

### New Customer

Order to be followed after bundling 2.8.2

- Install 2.8 base version
- Pre Install cab file
- Install 2.8.2 cab file
- Post Install 2.8.2 cab file
- Post Install cab file

### Customer at 2.8 and not in 2.8.1

Order to be followed after bundling 2.8.2:

- Pre Install cab file
- Install 2.8.2 cab file
- Post Install 2.8.2 cab file
- Post Install cab file
- (Since the components are cumulative 2.8.1 can be skipped)

### Customer at 2.8.1

Order to be followed after bundling 2.8.2:

- Pre Install cab file
- Install 2.8.2 cab file
- Post Install 2.8.2 cab file
- Post Install cab file

If this order is not followed it will create issues in updating the C\_JFCOMPONENTS for Predefined Job flow. This is because the Cognos console works in a way where it captures the C\_JFCOMPONENTS table values of Regular Job Flow of the respective analytic of previous application (if exists) and populates the same SEQUENCE NO's into Predefined Job Id rows after the current application insertion.

## BI Specific Instructions

For BI solutions 229308 (GL) and 229310 (PA) that consists of solutions 228288 (GL Framework Model changes) and 224006 (PA Framework Model changes), there are SPECIAL INSTALLATION INSTRUCTIONS.

We are giving only the latest components in the Bundle, but not the log files for each solution in case of FM. If in case the customer has customization and want to RETAIN or REPLACE there model then they can use the approaches as mentioned in the SDS solution text of 228288 and 224006.
